

TRANSACTIONAL SMS API DOCUMENTATION

Purpose of the document

This document is intended to be a guide to clients who want to send SMS's via the Tylersoft SMS API

Revision History

Version	Author	Date	Description
1.0	Gaonyadiwe Gaboiphiwe	18/10/2024	Initial draft

Introduction

Tylersoft SMS API is a REST based API which enables registered clients to connect and send SMS(s).

The request format and details are explained in the subsequent sections.

Requirements to connect

- Client should be registered on the payment gateway
- API credentials for the API

Request Parameters (Fields)

Parameter Name	Mandatory/Optional	Description
message	M	The actual message to be sent
recipient	M	The mobile number of the individual who is supposed to receive the SMS. It should include the country code. Eg Botswana number should start with 267 followed by the subscriber's mobile number
clientId	M	The registered identity of the client sending the request
username	M	The registered username of the client sending the request
password	M	The password of the client sending the request
TransactionId	M	Unique transaction number

Sample SMS Request

```
{  
  "message": "This is a test sms",  
  "recipient": "26774769141",  
  "clientId": "1",  
  "username": "xxxx",  
  "password": "xxxxxxx",  
  "TransactionId": "72134"  
}
```

Sample Success response

```
{  
  "Message": "SMS was sent Successfully!",  
  "Responsecode": "00"  
}
```

Sample fail response

```
{  
  "Message": "SMS not sent!",  
  "Responsecode": "99"  
}
```

Response Codes

Responsecode	Type	Status
00	String	Successful
99	String	Failed
